## Ex No: 6

#### Date:

# RECOGNIZE A VALID VARIABLE WITH LETTERS AND DIGITS USING LEX AND YACC

## AIM:

To recognize a valid variable which starts with a letter followed by any number of letters or digits.

#### **ALGORITHM:**

# Lex (exp6.l):

- 1. Recognizes letters, digits, any single character, and newline.
- 2. Returns tokens for letters, digits, and single characters.
- 3. Indicates the end of input with yywrap().

# Yacc (exp6.y):

- 1. Includes headers and defines global variables.
- 2. Declares tokens digit and letter.
- 3. Defines grammar rules for identifiers.
- 4. Handles syntax errors with yyerror().
- 5. The main function, obtain the input, parses it, and prints if it's recognized as an identifier.

# **PROGRAM:**

## **exp6.l**:

Roll Number: 210701097 Name: Jeyapriyan M

```
}
exp6.y:
% {
  #include<stdio.h>
  int yylex();
  int yyerror();
  int valid=1;
% }
%token digit letter
%%
start : letter s
     letter s
s:
   | digit s
%%
int yyerror(){
  printf("\nIts not a identifier!\n");
  valid=0;
  return 0;
}
```

Roll Number: 210701097 Name: Jeyapriyan M

```
int main() {
    printf("\nEnter a name to test for an identifier: ");
    yyparse();
    if(valid) {
        printf("\nIt is a identifier!\n");
     }
}
OUTPUT:
```

#### **RESULT:**

Thus, a program using lex and yacc tool is implemented to recognize a valid variable which starts with a letter followed by any number of letters or digits.

Roll Number: 210701097 Name: Jeyapriyan M
